Installation and Configuration on Windows

- Setup Software Only
- Create and Configuration Database (DBCA)

Select Configuration Option

- Configuration Option
- Database Installation Options**
- Install Type
- Oracle Home User
- Installation Location
- Configuration Type
- Database Identifiers
- Configuration Options
- Database Storage
- Management Options
- Recovery Options
- Schema Passwords
- Prerequisite Checks
- Summary
- Install Product
- Finish

Select any of the following install options.

☐ Create and configure a single instance database.

This option creates a starter database.

 ☒ **Set Up Software Only**

Note 1: For RAC install, do 'Set Up Software Only' and then execute DBCA (Database Configuration Assistant) from the oracle home.

Note 2: To upgrade an Oracle Database, do 'Set Up Software Only' and then execute DBUA (Database Upgrade Assistant) from the oracle home.

Which database edition do you want to install?

☒ **Enterprise Edition**

Oracle Database 19c Enterprise Edition is a self-managing database that has the scalability, performance, high availability, and security features required to run the most demanding, mission-critical applications.

☐ **Standard Edition 2**

Oracle Database 19c Standard Edition 2 is a full-featured data management solution ideally suited to the needs of medium-sized businesses.

Memory Sizing Character sets Connection mode Sample schemas

☒ **Dedicated server mode**

The database will allocate a dedicated resource for each client connection in this mode. Use this mode when the number of total client connections is expected to be small or when clients will be making persistent, long-running requests to the database.

☐ **Shared server mode**

The database will use a shared pool of allocated resources for all client connections in this mode. Use this mode when a large number of users need to connect to the database simultaneously while efficiently utilizing system resources.

Specify the number of Shared Servers, which will be the number of processes that will be created when the instance is started.

Shared servers:

Offline Files

[Start the service](#)

Description:
The Offline Files service performs maintenance activities on the Offline Files cache, responds to user logon and logoff events, implements the internals of the public API, and dispatches interesting events to those interested in Offline Files activities and changes in cache state.

Provide a unique database identifier information. An Oracle database is uniquely identified by a Global database name, typically of the form "name.domain".

Global database name: TEST.alitopacik.com

SID: TEST

Service name:

☒ **Create as Container database**

A Container database can be used for consolidating multiple databases into a single database, and it enables database virtualization. A Container database (CDB) can have zero or more pluggable databases (PDB).

☒ **Use Local Undo tablespace for PDBs**

☐ **Create an empty Container database**

☒ **Create a Container database with one or more PDBs**

Number of PDBs: 1

PDB name: pdb

Database creation complete. For details check the logfiles at:
C:\Oracle19c\app\Al\cfgtoollogs\dbca\TEST.

Database Information:

Global Database Name:	TEST.alitopacik.com
System Identifier(SID):	TEST
Server Parameter File name:	C:\ORACLE19C\V982656-01\DATABASE\SPFILETEST.ORA
EM Database Express URL:	https://DESKTOP-FAUR3JH:5500/em

Note: All database accounts except SYS and SYSTEM are locked. Select the Password Management button to view a complete list of locked accounts or to manage the database accounts. From the Password Management window, unlock only the accounts you will use. Oracle strongly recommends changing the default passwords immediately after unlocking the account.
